

the coronaviridae the viruses

[#Coronaviridae](#) [#viruses](#) [#virus family](#) [#viral pathogens](#) [#coronaviruses](#)

The Coronaviridae represent a significant family of RNA viruses known to infect a wide range of hosts, including mammals and birds. These viral pathogens are characterized by their distinct crown-like spikes on their surface, a feature that lends them their name 'coronavirus'. Understanding the Coronaviridae family is crucial for studying various associated diseases and their impact.
