Asbestos, explosives, and chemical waste are only a few of the hazards involved in the meticulous work of destroying a giant ship. When new labor laws and environmental standards came to Europe, the ship-breaking industry moved to places like Chittagong on the coast of Bangladesh-places where the lives of workers seem expendable, and the environment is someone else's problem. follows the demise of the Asian Tiger, a ship destroyed at one of the twenty ship-breaking yards along the beaches of Chittagong. BBC Bangladesh correspondent Roland Buerk takes us through the process-from beaching the vessel to its final dissemination, from wealthy shipyard owners to poverty-stricken ship cutters, and from the economic benefits for Bangladesh to the pollution of its once pristine beaches.

Mosby's Prep Guide for the Canadian PN Exam E-Book

A review of the experiences of the Canadian provinces with large-scale testing programs to suggest answers to questions discussed currently in the U.S. regarding this proposal. In the Canadian provinces,

tests are linked to provincial curricula and measure the extent to which students have achieved provincial standards developed through the widespread involvement of teachers, provincial officials, and subject-area experts.

The National Curriculum in England - Handbook for Primary Teachers

The experience of the Canadian provinces with large-scale testing programs is reviewed to suggest answers to questions currently discussed in the United States regarding the proposed national system of achievement testing. In the Canadian provinces, tests are linked to provincial curricula. Standards and assessments are not set by experts with no direct responsibility for implementing curriculum and instruction, but are prepared with the cooperation of teachers and administrators. Assessments cover broad subject areas and monitor the overall education system, and examinations certify individuals' mastery of specific high school courses. The provinces have not found it necessary to attach high stakes to all tests. Examination results are used in conjunction with teacher-assigned grades, and assessments have no consequences for individual students. Safeguards have been developed for each type of test; and provincial school funding formulas, which are independent of the testing process, tend to level resources among schools within a province. Most Canadian educators and the public support the testing programs, but they have no hard evidence that the programs lead directly to improved instruction. Appendixes list characteristics of the provincial programs, participants in site and telephone interviews, and major contributors to the report. Fourteen tables provide information about the testing programs. (Contains 8 references.) (SLD)

Democracy and Education

The emergence of severe acute respiratory syndrome (SARS) in late 2002 and 2003 challenged the global public health community to confront a novel epidemic that spread rapidly from its origins in southern China until it had reached more than 25 other countries within a matter of months. In addition to the number of patients infected with the SARS virus, the disease had profound economic and political repercussions in many of the affected regions. Recent reports of isolated new SARS cases and a fear that the disease could reemerge and spread have put public health officials on high alert for any indications of possible new outbreaks. This report examines the response to SARS by public health systems in individual countries, the biology of the SARS coronavirus and related coronaviruses in animals, the economic and political fallout of the SARS epidemic, quarantine law and other public health measures that apply to combating infectious diseases, and the role of international organizations and scientific cooperation in halting the spread of SARS. The report provides an illuminating survey of findings from the epidemic, along with an assessment of what might be needed in order to contain any future outbreaks of SARS or other emerging infections.

Learning from SARS

With an introduction by novelist David Vann In April 1992, Chris McCandless set off alone into the Alaskan wild. He had given his savings to charity, abandoned his car and his possessions, and burnt the money in his wallet, determined to live a life of independence. Just four months later, Chris was found dead. An SOS note was taped to his makeshift home, an abandoned bus. In piecing together the final travels of this extraordinary young man's life, Jon Krakauer writes about the heart of the wilderness, its terribly beauty and its relentless harshness. Into the Wild is a modern classic of travel writing, and a riveting exploration of what drives some of us to risk more than we can afford to lose.

Bulletin of the Atomic Scientists

MTR; Music Trades Review

The main focus of this book is on the causation of starvation in general and of famines in particular. The author develops the alternative method of analysis—the 'entitlement approach'—concentrating on ownership and exchange, not on food supply. The book also provides a general analysis of the characterization and measurement of poverty. Various approaches used in economics, sociology, and political theory are critically examined. The predominance of distributional issues, including distribution between different occupation groups, links up the problem of conceptualizing poverty with that of analyzing starvation.

The Examiner

Many Americans believe that people who lack health insurance somehow get the care they really need. *Care Without Coverage* examines the real consequences for adults who lack health insurance. The study presents findings in the areas of prevention and screening, cancer, chronic illness, hospital-based care, and general health status. The committee looked at the consequences of being uninsured for people suffering from cancer, diabetes, HIV infection and AIDS, heart and kidney disease, mental illness, traumatic injuries, and heart attacks. It focused on the roughly 30 million-one in seven-working-age Americans without health insurance. This group does not include the population over 65 that is covered by Medicare or the nearly 10 million children who are uninsured in this country. The main findings of the report are that working-age Americans without health insurance are more likely to receive too little medical care and receive it too late; be sicker and die sooner; and receive poorer care when they are in the hospital, even for acute situations like a motor vehicle crash.
