Plan-based and agile software processes - Plan-based and agile software processes by Ian Sommerville 31,492 views 9 years ago 12 minutes, 1 second - This video introduces fundamental **software**, processes - waterfall, iterative and reuse-based processes and explains that real ...

Agile and plan-based software processes

Specification - defining what the software should do

Implementation and testing - programming the system and checking that it does what the customer wants

In agile processes, planning is incremental and it is easier to change the plan and the software to reflect changing customer requirements.

Different types of system need different software processes

Inflexible partitioning of the project into distinct stages makes it difficult to respond to changing customer requirements.

Waterfall processes are only appropriate when the requirements are well understood and changes limited during the design process.

Based on incremental development where process activities are interleaved

Minimal documentation

Systems are integrated from existing components or application systems.

Stand-alone application systems that are configured for use in a particular environment.

Reusable components that are integrated with other reusable and specially written components

Requirements are planned in advance but an iterative and agile approach can be taken to design and implementation
