Subnetting IPv6 Addresses - Subnetting IPv6 Addresses by ITFreeTraining 83,598 views 5 years ago 12 minutes, 20 seconds - Due to **IPv6**, having 16 bits dedicated for subnetting, the subnet mask is not required. **Simple IPv6**, Subnetting Example 0:58 In this ...

Given that IPv6 has a much larger address space than IPv4, 16 bits of an IP Address is dedicated to subnetting. In IPv4, a subnet mask had to be used to determine which parts of the IPv4 address would be used to define the network and which parts of the IP Address would be used to define a host on the network. Due to IPv6 having 16 bits dedicated for subnetting, the subnet mask is not required.

IPv6, uses a 128 bit address, so this means that the first ...

In this example, the subnet ID has been broken into four giving four bits for each part. Working with addresses that are aligned to four bit boundaries makes it easy to work with. This is because the breakdown is aligned with the values in the address. For example, the first value will represent the country. This value ranges from zero to f. So looking at the first value in the subnet ID, this will tell you the country the address has been allocated to. For example, you could have any address starting with zero for America and one for England. The second value in the subnet ID in this example is allocated to state. If we take the American one as an example an address starting with 00 would be America and the first state; 01 would be American and the second state. If we were to look at an address starting with 1. This would mean the address is for England. The first county in England would start with zero, thus the subnet ID would start with 10. The second county would have a value of one meaning the address would be 11. Further bits are allocated to offices and departments. So taking an example subnet ID of 1432 would mean the country is England, the county is the fourth county, the office is the third office and the department in that office would be the second. Working with 4 or 8 bit boundaries makes it easy to work out which network the subnet ID is referring to.

### Procedures Checklist to Fundamentals of Nursing

Providing forward-thinking approaches and ideas for nurses of all categories, this reference has been written primarily in response to increasing concerns regarding the perceived lack of ability in both students and newly qualified nurses to perform clinical skills. By outlining the elements of essential nursing procedure in a readily accessible format, including rationale for recommended actions and promoting evidence-based practice, this text encourages the reader to keep a record of achievement in relation to clinical skill competence. The selection of skills included is based on extensive consultation with experienced clinicians, students, clients and teachers of nursing. Each procedure has been carefully researched to provide a contemporary foundation for practice. The text also contains a rapid reference section of common terminology, conversion tables, laboratory results and other useful information.
