Rock, Paper, Scissors

The young Canadian designer Julien Vallée is a leading expert at melding a variety of analog and digital design techniques into outstanding work.

Rock, Paper, Scissors

Game Theory is the study of co-operation and the underlying strategies that shape human behaviour. In *Rock, Paper, Scissors*, Len Fisher unearths the wide-ranging applications for this science, and the ways we can use its discoveries to find effective means to co-operate in daily life. Whether we want to understand where a shared supply of teaspoons disappears to, or why countries take themselves to the brink of nuclear war, Game Theory reveals the decision-making process. Len Fisher's writing brings this science of interaction to life with anecdotes and applications that are sure to spark the imagination and give you pause for thought. Dealing with collaboration, co-operation, completion and confrontation, *Rock, Paper, Scissors* is essential reading for anyone interest in what it takes to get people to work together.

Rock, Paper, Scissors

Here's the card version of the game kids have played for generations. Each player lays down a card, if your card beats your opponent's card, you take it. When all the cards have been played, the player who has collected the most cards wins!

Ulysses

Originally published in 1962, when Lefebvre was beginning his career as a lecturer in sociology at the University of Strasbourg, it established his position in the vanguard of a movement which was to culminate in the events of May 1968. A classic analysis of the modern world using Marxist dialectic, it is a book which supersedes the conventional divisions between academic disciplines. With dazzling skill, Lefebvre moves from philosophy to sociology, from literature to history, to present a profound analysis of the social, political and cultural forces at work in France and the world in the aftermath of Stalin's death—an analysis in which the contours of our own "postmodernity" appear with startling clarity.

Introduction to Modernity

Reproduction of the original: *The Symbolist Movement in Literature* by Arthur Symons

Hebrew Melodies

With their early experiments in psychedelic rock music in the 1960s, and their epic recordings of the 1970s and '80s, Pink Floyd became one of the most influential and recognizable rock bands in history. As "The Pink Floyd Sound," the band created sound and light shows that defined psychedelia in England and inspired similar movements in the Jefferson Airplane's San Francisco and Andy Warhol's New York City. The band's subsequent recordings forged rock music's connections to orchestral music, literature, and philosophy. "Dark Side of the Moon" and "The Wall" ignored pop music's ordinary topics to focus on themes such as madness, existential despair, brutality, alienation, and socially induced psychosis. They also became some of the best-selling recordings of all time. In this collection of essays, sixteen scholars expert in various branches of philosophy set the controls for the heart of the sun to critically examine the themes, concepts, and problems—usually encountered in the pages of Heidegger, Foucault, Sartre, or Orwell—that animate and inspire Pink Floyd's music. These include the meaning of existence, the individual's place in society, the interactions of knowledge and power in education, the contradictions of art and commerce, and the blurry line—the tragic line, in the case of Floyd early member Syd Barrett (died in 2006)—between genius and madness. Having dominated pop music for nearly four decades, Pink Floyd's dynamic and controversial history additionally opens the way for these authors to explore controversies about intellectual property, the nature of authorship, and whether wholes—especially in the case of rock bands—are more than the sums of their parts.

The Symbolist Movement in Literature

Pink Floyd and Philosophy

The beloved webcomic collected in its entirety for the first time in a beautiful deluxe edition! Author Alec Robbins is deeply in love with his wife, 1930s cartoon superstar Betty Boop. And wouldn't you know it, she loves him back! It's the perfect marriage, and nothing will ever go wrong. They'll be happy together forever and nothing will ever come between them--not other famous cartoon characters, not intellectual property law, and certainly not Alec's own towering insecurities. Basically, they're just both really happy together and everything's good and nice and that's the end of it. No more questions. Don't even bother reading this comic. Absurdist humor, a middle finger to corporate IP, and a sweetly romantic heart blend together into one of the most inventive comics of the Twitter age.

A Book for All Readers

About the life of Buddha

Mr. Boop

This book takes readers back and forth through time and makes the past accessible to all families, students and the general reader and is an unprecedented collection of a list of events in chronological order and a wealth of informative knowledge about the rise and fall of empires, major scientific breakthroughs, groundbreaking inventions, and monumental moments about everything that has ever happened.

2500 Years of Buddhism

Marek Kuczma was born in 1935 in Katowice, Poland, and died there in 1991. After finishing high school in his home town, he studied at the Jagiellonian University in Kraków. He defended his doctoral dissertation under the supervision of Stanislaw Golab. In the year of his habilitation, in 1963, he obtained a position at the Katowice branch of the Jagiellonian University (now University of Silesia, Katowice), and worked there till his death. Besides his several administrative positions and his outstanding teaching activity, he accomplished excellent and rich scientific work publishing three monographs and 180 scientific papers. He is considered to be the founder of the celebrated Polish school of functional equations and inequalities. "The second half of the title of this book describes its contents adequately. Probably even the most devoted specialist would not have thought that about 300 pages can be written just about the Cauchy equation (and on some closely related equations and inequalities). And the book is by no means chatty, and does not even claim completeness. Part I lists the required preliminary knowledge in set and measure theory, topology and algebra. Part II gives details on solutions of the Cauchy equation and of the Jensen inequality [...], in particular on continuous convex functions, Hamel bases, on inequalities following from the Jensen inequality [...]. Part III deals with related equations and inequalities (in particular, Pexider, Hosszú, and conditional equations, derivations, convex functions of higher order, subadditive functions and stability theorems). It concludes with an excursion into the field of extensions of homomorphisms in general." (Janos Aczel, Mathematical Reviews) "This book is a real holiday for all the mathematicians independently of their strict speciality. One can imagine what deliciousness represents this book for functional equationists." (B. Crstici, Zentralblatt für Mathematik)

The History of Signboards, from the Earliest Times to the Present Day

A number of years ago, Harriet Sheridan, then Dean of Brown University, organized a series of lectures in which individual faculty members described how it came about that they entered their various fields. I was invited to participate in this series and found in the invitation an opportunity to recall events going back to my early teens. The lecture was well received and its reception encouraged me to work up an expanded version. My manuscript lay dormant all these years. In the meanwhile, sufficiently many other mathematical experiences and encounters accumulated to make this little book. My 1981 lecture is the basis of the first piece: "Napoleon's Theorem." Although there is a connection between the first piece and the second, the four pieces here are essentially independent. The second piece, "Carpenter and the Napoleon Ascription," has as its object a full description of a certain type of scholar-storyteller (of whom I have known and admired several). It is a pastiche, containing a salad bar selection blended together by my own imagination. This piece purports, as a secondary goal, to present a solution to a

certain unsolved historical problem raised in the first piece. The third piece, "The Man Who Began His Lectures with 'Namely'," is a short reminiscence of Stefan Bergman, one of my teachers of graduate mathematics. Bergman, a remarkable personality, was born in Poland and came to the United States in 1939.

Timelines of Nearly Everything

Presents the movement as not merely an aesthetic vocabulary, but also as a subversive attitude - a new way of looking at the world.

An Introduction to the Theory of Functional Equations and Inequalities

Surreal Friends brings together for the first time the work of three women Surrealist artists, brought together in exile in Mexico in the 1940s: British painter Leonora Carrington, Spanish painter Remedios Varo and Hungarian photographer Kati Horna. For all three women, Mexico offered freedom to explore their art in ways that had not been possible in Europe. Surreal Friends tells the fascinating story of their artistic friendship.

Mathematical Encounters of the Second Kind

Explores how Gershwin's iconic music was shaped by American political, intellectual, cultural and business interests as well as technological advances.

Songs & Poems

A comprehensive encyclopedia of the unexplained, with incredible eyewitness accounts of strange creatures from around the globe. Including: Angles and Demons; The Mothman; Dinosaurs that still roam the earth; Bigfoot, the Abominable Snowman, and other hairy monsters; A real-life land of the giants; The Loch Ness monster, the Silver Lake Sea Serpent, and other lake creatures; Dragons; Giant Flying Snakes; Carnivorous Plants from outer space; Unidentified submarine objects; Aliens, bedroom invaders, and cattle rustlers from the skies; The Grinning Man; Green men, Leprechauns, and other little people; Vampires and Werewolves and much more....

Postmodernism

Filmatised in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Northup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

Surreal Friends

Many mathematicians have been drawn to mathematics through their experience with math circles: extracurricular programs exposing teenage students to advanced mathematical topics and a myriad of problem solving techniques and inspiring in them a lifelong love for mathematics. Founded in 1998, the Berkeley Math Circle (BMC) is a pioneering model of a U.S. math circle, aspiring to prepare our best young minds for their future roles as mathematics leaders. Over the last decade, 50 instructors--from university professors to high school teachers to business tycoons--have shared their passion for mathematics by delivering more than 320 BMC sessions full of mathematical challenges and wonders. Based on a dozen of these sessions, this book encompasses a wide variety of enticing mathematical topics: from inversion in the plane to circle geometry; from combinatorics to Rubik's cube and abstract

algebra; from number theory to mass point theory; from complex numbers to game theory via invariants and monovariants. The treatments of these subjects encompass every significant method of proof and emphasize ways of thinking and reasoning via 100 problem solving techniques. Also featured are 300 problems, ranging from beginner to intermediate level, with occasional peaks of advanced problems and even some open questions. The book presents possible paths to studying mathematics and inevitably falling in love with it, via teaching two important skills: thinking creatively while still "obeying the rules," and making connections between problems, ideas, and theories. The book encourages you to apply the newly acquired knowledge to problems and guides you along the way, but rarely gives you ready answers. "Learning from our own mistakes" often occurs through discussions of non-proofs and common problem solving pitfalls. The reader has to commit to mastering the new theories and techniques by "getting your hands dirty" with the problems, going back and reviewing necessary problem solving techniques and theory, and persistently moving forward in the book. The mathematical world is huge: you'll never know everything, but you'll learn where to find things, how to connect and use them. The rewards will be substantial. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession.

The Cambridge Companion to Gershwin

Thanks to modern technology, we are now living in an age of multiplatform fictional worlds, as television, film, the Internet, graphic novels, toys, and more facilitate the creation of diverse yet compact imaginary universes, which are often recognizable as brands and exhibit well-defined identities. This volume, situated at the cutting edge of media theory, explores this phenomenon from both theoretical and practical perspectives, uncovering how the construction of these worlds influences our own determination of values and meaning in contemporary society.

The Memoirs of François René

Praise for David Darling The Universal Book of Astronomy "A first-rate resource for readers and students of popular astronomy and general science. . . . Highly recommended." -Library Journal "A comprehensive survey and . . . a rare treat." -Focus The Complete Book of Spaceflight "Darling's content and presentation will have any reader moving from entry to entry." -The Observatory magazine Life Everywhere "This remarkable book exemplifies the best of today's popular science writing: it is lucid, informative, and thoroughly enjoyable." -Science Books & Films "An enthralling introduction to the new science of astrobiology." -Lynn Margulis Equations of Eternity "One of the clearest and most eloquent expositions of the quantum conundrum and its philosophical and metaphysical implications that I have read recently." -The New York Times Deep Time "A wonderful book. The perfect overview of the universe." -Larry Niven

The Complete Guide to Mysterious Beings

Two lovers rush toward doom, as an unseen killer stalks the world. A novel of the fourth dimension's conquest of Earth.

The Stones of Paris in History and Letters

One of the BBC's '100 Novels That Shaped Our World' 'Brilliant ... very probably the funniest book ever written' Sunday Times When sensible, sophisticated Flora Poste is orphaned at nineteen, she decides her only choice is to descend upon relatives in deepest Sussex. At the aptly-named Cold Comfort Farm, she meets the doomed Starkadders: cousin Judith, heaving with remorse for unspoken wickedness; Amos, preaching fire and damnation; their sons, lustful Seth and despairing Reuben; child of nature Elfine; and crazed old Aunt Ada Doom, who has kept to her bedroom for the last twenty years. But Flora loves nothing better than to organise other people. Armed with common sense and a strong will, she resolves to take each of the family in hand. A hilarious and ruthless parody of rural melodramas and purple prose, Cold Comfort Farm is one of the best-loved comic novels of all time. 'Screamingly funny and wildly subversive' Marian Keyes, Guardian The Penguin Classics edition of Stella Gibbons's Cold Comfort Farm is introduced by Lynne Truss, author of Eats, Shoots and Leaves. If you enjoyed Cold Comfort Farm you might like George and Weedon Grossmith's Diary of a Nobody, also available in Penguin Classics.

Twelve Years a Slave

Everything educators need to know to enhance learning for ESL students. This unique teacher time-saver includes scores of helpful, practical lists that may be reproduced for classroom use or referred to in the development of instructional materials and lessons. The material contained in this book helps K-12 teachers reinforce and enhance the learning of grammar, vocabulary, pronunciation, and writing skills in ESL students of all ability levels. For easy use and quick access, the lists are printed in a format that can be photocopied as many times as required. A complete, thoroughly updated glossary at the end provides an indispensable guide to the specialized language of ESL instruction.

A Decade of the Berkeley Math Circle

Faced with widespread and devastating loss of biodiversity in wild habitats, scientists have developed innovative strategies for studying and protecting targeted plant and animal species in "off-site" facilities such as botanic gardens and zoos. Such ex situ work is an increasingly important component of conservation and restoration efforts. *Ex Situ Plant Conservation*, edited by Edward O. Guerrant Jr., Kayri Havens, and Mike Maunder, is the first book to address integrated plant conservation strategies and to examine the scientific, technical, and strategic bases of the ex situ approach. The book examines where and how ex situ investment can best support in situ conservation. *Ex Situ Plant Conservation* outlines the role, value, and limits of ex situ conservation as well as updating best management practices for the field, and is an invaluable resource for plant conservation practitioners at botanic gardens, zoos, and other conservation organizations; students and faculty in conservation biology and related fields; managers of protected areas and other public and private lands; and policymakers and members of the international community concerned with species conservation.

World Building

Reproduction of the original.

The Universal Book of Mathematics

"The phrase jazz dance has a special meaning for professionals who dance to jazz music (they use it to describe non-tap body movement); and another meaning for studios coast to coast teaching 'Modern Jazz Dance' (a blend of Euro-American styles that owes little to jazz and less to jazz rhythms). However, we are dealing here with what may eventually be referred to as jazz dance, and we could not think of a more suitable title. "The characteristic that distinguishes American vernacular dance--as does jazz music--is swing, which can be heard, felt, and seen, but defined only with great difficulty. . . ." --from the Introduction

A History of the French Novel: From the Beginning to the Close of the 19th Century (Complete)

This book traces the development of historiography from the days of Herodotus to those of post-modernism. It covers the ancient, medieval and the modern aspects of the subject and offers easy comprehension, clear and precise guidance and immediate utility. The author provides a balanced view of competing ideas and leads the reader into the vast arena of the subject. Two thousand five hundred years of historiography, including Indian historiography and the poststructuralist critique of history, constitutes this clear, analytical work.

The Murderer Invisible

An in-depth look at the most groundbreaking and controversial comic book series of the last decade.

Cold Comfort Farm

Many books have covered the topics of architecture, materials and technology. 'New Architecture and Technology' is the first to explore the interrelation between these three subjects. It illustrates the impact of modern technology and materials on architecture. The book explores the technical progress of building showing how developments, both past and present, are influenced by design methods. It provides a survey of contemporary architecture, as affected by construction technology. It also explores aspects of building technology within the context of general industrial, social and economic developments. The reader will acquire a vocabulary covering the entire range of structure types and learn a new approach to understanding the development of design.

B2 English Story Slow Living

By practising slow living, I am starting to appreciate the finer things in life. The sound of the motorway humming in the distance, the birds twittering away in the trees, the click of the kettle as it finishes boiling the water. I feel more aware and grounded than ever before.

I now have a capsule wardrobe consisting of a handful of t-shirts and jumpers, trousers and jeans, and some shorts and skirts.

I mix and match everything. No one needs to have loads of clothes. Sometimes I think we get carried away with trends and become a little greedy.

Intro

B2 English Story The Daydreamers

What is a life doing the same day in, day out? Of course, some people enjoy this, some people relish in this, some people can't see their life being any other way

These people are the type of people who do their washing on a Monday, their food shop on a Tuesday, their cleaning on a Wednesday, and so on.

For example, if you are born into royalty, you already have a semi-set plan for life. If you are an heir to the throne, that is what you are destined to do. Unless, of course, you decide to abdicate the throne. You might be born into a family of doctors and lawyers and don't want to follow the family path at all. I should imagine that could be rather trapping. What if you want to be an artist, or a teacher, or perhaps you want to be something completely different, like a farmer!

This doesn't always sit well with some families as they want to see their children in so-called "well respected jobs". In my eyes, all jobs should be respected, no matter what they are!
