Advanced Financial Accounting : Solutions Manual

"Leadership and learning are indispensable to each other.." J.F Kennedy in his undelivered remarks. If we let ourselves, we shall always be waiting for some distraction or other to end before we can really get down to our work. The only people who achieve much are those who want knowledge so badly that they seek it while the conditions are still unfavourable. Favourable conditions never come. This book presents a new learning style evident with today's students and addresses accounting industry changes as well. This textbook is not written as a reference text, rather it is written in another form where knowledge can be bridged and tested through questions and answers in a multiple choice format. To gain most from the text, we would advise you to read topics relevant to the multiple choices so as to be able to attempt the questions raised. The answers to the questions are provided towards the back pages of the text. The book will in small measure assist students in preparation for their regular academic and professional exams. Accounting has evolved over the years especially in the areas of standard setting and global inventions and innovations. The book basically covers advanced topics in financial accounting and & Reporting. It will help broaden the base of Finance Managers, accounting students, accountants, corporate gurus and managers of businesses. Don't forget that: The more that you read, the more things you will know. The more that you learn, the more places you'll go.
