4.E: Graph Theory (Exercises)

7 Jul 2021 — Is it possible for two different (non-isomorphic) graphs to have the same number of vertices and the same number of edges? What if the degrees of the vertices in the two graphs are the same (so both graphs have vertices with degrees 1, 2, 2, 3, and 4, for example)? Draw two such graphs or explain why ...

Mathematics 1 Part I: Graph Theory Exercises and problems

The problems of this collection were initially gathered by Anna de Mier and Montserrat Mau- reso. Many of them were taken from the problem sets of several courses taught over the years by the members of the Departament de Matem`atica Aplicada 2. Other exercises came from the bibliography of the course or from other ...

Prove that the sum of the degrees of the vertices of any finite graph is even. 2. Show that every simple graph has two vertices of the same degree. 3. Show that if n people ...

Graph Theory Problems/Solns

Graph Theory Problems/Solns. 1. There are n participants in a meeting. Among any group of 4 participants, there is one who knows the other three members of the group. Prove that there is one participant who knows all other participants. Soln. Define a graph where each vertex corresponds to a participant and where two.

Graph theory - solutions to problem set 1

Graph theory - solutions to problem set 1. 1. Given a graph G with vertex set $V = \{v_1, \dots, v_n\}$ we define the degree sequence of G to be the list $d(v_1), \dots, d(v_n)$ of degrees in decreasing order. For each of the following lists, give an example of a graph with such a degree sequence or prove that no such graph exists:.

Common Graph Theory Problems - Towards Data Science

by P Feofiloff · 2019 — Graph theory studies combinatorial objects called graphs. These objects are a good model for many problems in mathematics, computer science, and engineering. Graph theory is not really a theory, but a collection of problems. Many of those problems have important practical applications and present.

Applications of Graph Theory in Real Life - GeeksforGeeks

15 Apr 2021 — Prove that any graph (not necessarily a tree) with v vertices and e edges that satisfies $v > e + 1$ will NOT be connected. [Hint: try a proof by contradiction and consider a spanning tree of the graph.] 6. If a graph ...
