

# Neither Simple Nor Sequential Arm Movements Are Bradykinetic In Parkinsonian Patients With Peak Dose Dyskinesias

[#Parkinson's disease](#) [#Peak dose dyskinesia](#) [#Arm movements](#) [#Bradykinesia](#) [#Motor symptoms PD](#)

Research indicates that Parkinson's disease patients experiencing peak dose dyskinesias do not exhibit bradykinesia in either simple or sequential arm movements. This finding highlights a specific context where the characteristic slowness of movement, often associated with Parkinson's, is absent despite the presence of dyskinesias.
